Lightweight DWH Data Analysis for SMEs

Lukas Dötlinger, Manuel Penz, Markus Reiter & Stephanie Widauer

University of Innsbruck, Innsbruck, Austria

Outline

- Motivation
- Methodology
- DWH Needs for SMEs
- Review of DWH Services
- Interim results

Motivation

- Increasing digitisation results in collection of more data
- SMEs are more commonly using digital systems
- They therefore need a proper way to organise their data

Methodology

- Determine the specific needs for a DWH
- Summarise key factors and challenges

Methodology

- Research for different DWH solutions targeted at SMEs
- Comparison and classification of those systems
- Check of suitability for SMEs

DWH Needs for SMEs

• Heavy reliance on spreadsheets

• growing number of spreadsheets across multiple departments is unmanageable combining them all together

Overwhelming spreadsheets

• spreadsheets can reach the point where no data can be added anymore

Takes too much time to wait

• one spreadsheet per department means other employees have to wait for the newest version

DWH Needs for SMEs (contd.)

Discrepancies on data and reports

 different third party information in every department's spreadsheet could lead to data discrepancies after combining all together

Too much time invested in creating reports

 auto update the DWH System after data in sources changes – departments can rely on always correct up to date Data

Review of DWH Services

- Software as a Service (SaaS) / Data Warehouse as a Service (DWaaS)
 - cost-effective pay-as-you-go model
 - straightforward setup
 - no hardware necessary, can be deployed instantly
- Review & Comparison of DWaaS Products
 - What do they have in common?
 - · How do they differ?
 - Are they suitable for small businesses?

DWH Services

Services we have compared:

- Segment
- Panoply

- Tableau
- SERVICE STEFANIE

Segment

- customer data platform
- plans
 - Free: 2 data sources, 1,000 API calls, 300+ integrations
 - Team: unlimited data sources, 10,000-100,000 API calls (\$120-\$1,125/month)
 - Business: 100,000+ API calls, custom pricing
- in total 98 data sources and 650 data destinations
- programming languages or ReST APIs as data sources allow integration of virtually any system
- no analytics capability, meant to simplify data collection and distribution by managing all data flow in one place

Panoply

Tableau

- Data visualisation & data reporting with help of machine learning
- Tableau Software Inc. offers a tool for every step in the analytics/business intelligence (BI) cycle:
 - Transactions Stored no actual database data is stored in .tde or .hyper files
 - Data Analysed
 - Data Preparation Tableau Prep Builder
 - Analysis & Explore Tableau Desktop & Tableau Public
 - Insights Shared
 - Decisions Made
 - Outcomes Monitored
 - Safety & Security Tableau Server & Tableau Online & Tableau Mobile
 - Collaboration Tableau Server & Tableau Online & Tableau Mobile
 - Stability Tableau Server & Tableau Online & Tableau Mobile
 - Data centre or Cloud Tableau Server & Tableau Online & Tableau Mobile
